## Drill Matrix

## Attributes

Material hardness and machinability affect speed, feed, and cut depths.
For dimensional and finish quality, a low TIR of the tool-holder assembly in the machine is critical: less than $0.1 \%$ drill diameter is preferred.
Spot drilling is not necessary in most situations if the drilling surface is machined flat ; spot drill point angle should be greater than drill point angle.
Liquid coolant (internal or external) such as oil based or synthetic is highly recommended for all drilling applications.
For proper cooling, lubrication and chip evacuation, ensure the coolant is supplied throughout the entire depth of the hole.
When liquid coolant cannot be applied for applications such as plastics or composites, clear the swarf with air or vacuum.
Depending on material machinability, a peck cycle may be neccesary for external coolant drills beyond $2 x$ or $3 x$ depths.

## SERIES 142P

(A) $\frac{\text { 4-MARGIN DESIGN }}{\bullet}$
contact improves hole straightness and roundness

- provides improved stability for difficult applications like cross holes and when exiting on an angle
(B) $\frac{\text { POINT }}{\bullet \text { point design stabilizes on entry for }}$ exceptional hole size and cylindricity
- low thrust force reduces machine power requirement and extends tool life
- easily resharpened 142P Drill allow the product to offer application benefits not only beyond that of standard carbide drills, but also other High Performance drills. Each feature of the Hi-PerCarb ${ }^{\circledR}$ Series 142P Drill was uniquely engineered as a solution towards addressing the issues commonly encountered during high production drilling.

## PERFORMANCE.

## TESTING PARAMETERS

- 3/8" Diameter
- 8XD Length of Cut
- 4140 Alloy Steel
- 3360 rpm
- 30 ipm
- 3.0" axial depth - blind
- TSC - Water Sol 8.9\%

## HOLE FINISH TEST RESULTS

The lower numerical value shown in the chart demonstrates an improved surface finish in alloy steel versus other competitors tested.

## TOOL LIFE

All tools were tested until catastrophic failure, and under these conditions, the HI-PERCARB ${ }^{\circledR}$ 142P produced the most holes versus the competition.

## CYLINDRICITY

CMM measurements of 14 random holes per competitor indicate the 142P cylindricity is the best among those tested.

HOLE FINISH

TOOL LIFE

## CYLINDRICITY

The structural design of Ti-NAMITE ${ }^{\oplus}-\mathrm{X}$ is adapted to meet a diverse range of applications; everything from high- and low- alloy steels to hardened materials (up to 65 HRC core hardness). Ti-NAMITE ${ }^{\oplus}-\mathrm{X}$ is suitable for operations which require high cutting speeds, high temperatures at the cutting edge, and high metal removal rates.

## Hardness (HV): $\mathbf{3 6 0 0}$

Oxidation Temperature: $1150^{\circ} \mathrm{C}-2100^{\circ} \mathrm{F}$
Coefficient of Friction: $\mathbf{0 . 4 5}$
Thickness: 1 - 4 Microns (based on tool diameter)

FRACTIONAL \& METRIC
Series 142P

- High-performance point
design stabilizes on
entry for exceptional
hole size and cylindricity
while also allowing for
low thrust force and
extended tool life
- Internal coolant hole
improves coolant flow to
extend tool life and aid
in chip evacuation
- 4-margin design
improves hole
straightness and
roundness while
providing improved
stability for difficult
applications like cross
holes and when exiting
on angle
- Proprietary Ti-NAMITE - -X
coating and industry
leading carbide substrate
provides exceptional
wear resistance and
toughness for demanding
applications
- Recommended for
materials $\leq 50 H R c$
(475 Bhn)

FRACTIONAL \& METRIC
Series 142P
$\square$
Common
$82 \pi \sqrt{0}$
Reach
Helix Angle
Internal
Point Angle
Margins
$\underset{\text { fractional \& MEtric series }}{\text { 142P }}$

- High-performance point design stabilizes on entry for exceptional hole size and cylindricity while also allowing for low thrust force and extended tool life
- Internal coolant hole improves coolant flow to extend tool life and aid in chip evacuation
- 4-margin design improves hole straightness and roundness while providing improved stability for difficult applications like cross holes and when exiting on angle
- Proprietary Ti-NAMITE ${ }^{\oplus}-\mathrm{X}$ coating and industry leading carbide substrate provides exceptional wear resistance and toughness for demanding applications
- Recommended for materials $\leq 50 \mathrm{HRc}$ (475 Bhn)

FRACTIONAL \& METRIC Series 142P

## 142P 8xD

FRACTIONAL \& METRIC SERIES

| - High-performance point |
| :--- | :--- |
| design stabilizes on |
| entry for exceptional |
| hole size and cylindricity |
| while also allowing for |
| low thrust force and |
| extended tool life |
| - Internal coolant hole |
| improves coolant flow to |
| extend tool life and aid |
| in chip evacuation |
| - 4-margin design |
| improves hole |
| straightness and |
| roundness while |
| providing improved |
| stability for difficult |
| applications like cross |
| holes and when exiting |
| on angle |
| - Proprietary Ti-NAMITE $\oplus-X$ |
| coating and industry |
| leading carbide substrate |
| provides exceptional |
| wear resistance and |
| toughness for demanding |
| applications |
| - Recommended for |
| materials $\leq 50 H R c$ |
| (475 Bhn) |

FRACTIONAL \& METRIC
$\underset{\text { Common }}{\square}$

Internal
Point Angle

New Expanded Tools

- High-performance point design stabilizes on entry for exceptional hole size and cylindricity while also allowing for low thrust force and extended tool life
- Internal coolant hole improves coolant flow to extend tool life and aid in chip evacuation
- 4-margin design improves hole straightness and roundness while providing improved stability for difficult applications like cross holes and when exiting on angle
- Proprietary Ti-NAMITE ${ }^{\oplus}-\mathrm{X}$ coating and industry leading carbide substrate provides exceptional wear resistance and toughness for demanding applications
- Recommended for materials $\leq 50 \mathrm{HRc}$ (475 Bhn)

FRACTIONAL \& METRIC
$\underset{\text { Common }}{\infty}$

Internal
Point Angle

New Expanded Tools

- High-performance point design stabilizes on entry for exceptional hole size and cylindricity while also allowing for low thrust force and extended tool life
- Internal coolant hole improves coolant flow to extend tool life and aid in chip evacuation
- 4-margin design improves hole straightness and roundness while providing improved stability for difficult applications like cross holes and when exiting on angle
- Proprietary Ti-NAMITE ${ }^{\oplus}-\mathrm{X}$ coating and industry leading carbide substrate provides exceptional wear resistance and toughness for demanding applications
- Recommended for materials $\leq 50 \mathrm{HRc}$ (475 Bhn)

high performance carbide drills

The key features designed into the Hi-PerCarb ${ }^{\circledR}$ Series 143M-S Drill allow the product to offer application benefits not only beyond that of standard carbide drills, but also other High Performance drills. Each feature of the Hi-PerCarb ${ }^{\circledR}$ Series 143M-S Drill was uniquely engineered as a solution towards addressing the issues commonly encountered during high production drilling.
(A)

## ECCENTRIC 2-MARGIN DESIGN

- eccentric margin design reduces frictional heat and minimizes material adhesion to the margins without weakening the drill

## SERIES 143M-S

- lower contact with the hole surface improves hole finish and quality, especially in gummy workpiece materials
(B) POINT exceptional hole size and cylindricity
- low thrust force reduces machine power requirement and extends tool life
- computer controlled edge hone protects against chip damage
(C) COOLANT THROUGH DESIGN
- the modified coolant hole exit increases flow for improved chip evacuation and extended tool life
(D) COATING AND CARBIDE exceptional wear and erosion resistance when drilling heat resisting alloys like Inconel, stainless steel, and titanium
- Series 143 M -S drills are manufactured from lab certified premium quality carbide

# PERFORMANCE. PRECISION. PASSION. HI-PERCARB® ${ }^{\circledR}$ SERIES 143M-S DRILLS 

## PERFORMANCE.

## TESTING PARAMETERS

FINISH COMPARISON (ALL MATERIALS)

- 3/8" Cutting Diameter
- 316 Stainless Steel (160 Bhn)
- 1630 rpm
- 9.8 ipm
- 1.875" Axial Depth
- TSC - Water Sol 8.9\%

## TITANIUM TESTING PARAMETERS

- 3/8" Cutting Diameter
- Ti6AI4v Titanium (38 HRc)
- 1630 rpm
- 7.8 ipm
- 1.875" Axial Depth
- TSC - Water Sol 8.9\%

## INCONEL TESTING PARAMETERS

- 3/8" Cutting Diameter
- 718 Inconel (43Hrc)
- 710 rpm
- 2.55 ipm
- 1.125" Axial Depth
- TSC - Water Sol 8.9

## FINISH COMPARISON TEST RESULTS

The lower numerical value shown in the chart demonstrates the improved surface finish of holes produced by a drill with an eccentric margin like the HI-PERCARB ${ }^{\circledR} 143 \mathrm{M}-\mathrm{S}$ in all materials tested versus holes made by drills with a normal margin.

TOOL LIFE COMPARISON

## TOOL LIFE COMPARISON TEST RESULTS

All tools were tested to failure, and under these conditions, the HI-PERCARB ${ }^{\circledR} 143 \mathrm{M}$-S produced the most holes versus the competition in both materials tested.

Excellent thermal and chemical resistance allows for dry cutting and improvements in performance of carbide. The coating has a high hardness giving great protection against abrasive wear and erosion.

```
Hardness (HV): 3700
Oxidation Temperature: 1100 % C - 2010}\mp@subsup{}{}{\circ}\textrm{F
Coefficient of Friction: 0.30
Thickness: 1-5 Microns (based on tool diameter)
```

FRACTIONAL \& METRIC
Series 143M-S
Common

## 143M-S 3xD

- Coolant through design improves coolant flow to extend tool life and aid in chip evacuation
- Eccentric 2-margin design reduces frictional heat and minimizes material adhesion to the margins without weakening the drill
- Computer controlled edge honing protects against chip damage
- High-performance point design stabilizes on contact for exceptional hole size and cylindricity allowing for low thrust force and extended tool life
- SGS Ti-NAMITE ${ }^{\oplus}$-A coating provides exceptional wear and erosion resistance when drilling heat resisting alloys like Inconel, Stainless Steel, and Titanium Alloys
- Recommended for materials $\leq 50 \mathrm{HRc}$ (475 Bhn)

FRACTIONAL \& METRIC
Series 143M-S
Common

## 143M-S 3xD

FRACTIONAL \& METRIC SERIES

| - Coolant through design |
| :--- |
| improves coolant flow to |
| extend tool life and aid |
| in chip evacuation |
| - Eccentric 2-margin |
| design reduces frictional |
| heat and minimizes |
| material adhesion to |
| the margins without |
| weakening the drill |
| - Computer controlled |
| edge honing protects |
| against chip damage |
| - High-performance point |
| design stabilizes on |
| contact for exceptional |
| hole size and cylindricity |
| allowing for low thrust |
| force and extended |
| tool life |
| - SGS Ti-NAMITE |
| coating provides |
| exceptional wear and |
| erosion resistance when |
| drilling heat resisting |
| alloys like Inconel, |
| Stainless Steel, and |
| Titanium Alloys |
| - Recommended for |
| materials |
| (475 Bhn) $50 H R c$ |

- Coolant through design improves coolant flow to extend tool life and aid in chip evacuation
- Eccentric 2-margin design reduces frictional heat and minimizes material adhesion to the margins without weakening the drill
- Computer controlled edge honing protects against chip damage
- High-performance point design stabilizes on contact for exceptional hole size and cylindricity allowing for low thrust force and extended tool life
- SGS Ti-NAMITE - -A coating provides exceptional wear and erosion resistance when drilling heat resisting alloys like Inconel, Stainless Steel, and Titanium Alloys
- Recommended for materials $\leq 50 \mathrm{HRc}$ (475 Bhn)

## PERFORMANCE.

## PRECISION.

SERIES 141K Hole Size Comparison vs. Competition in Class 40 Cast Iron

## PASSION.

Lab Results Indicate the Hi-Per Carb ${ }^{\circledR}$ Series 141 K Drill outperforms the competition in measured hole quality at a variety of speed and feed rates.

## TQNAMMTEOM

Features of Ti-NAMITE®-M include high wear resistance, reduced friction, and excellent prevention of cutting edge build up. This coating allows superior material removal rates and tool life when used in high performance operations in Cast Iron and Steel and with difficult to machine materials like Titanium.
Hardness (HV): 3600
Oxidation Temperature: $1150^{\circ} \mathrm{C} / 2100^{\circ} \mathrm{F}$
Coefficient of Friction: 0.45
Thickness: 1-4 Microns (based on tool diameter)

- 3-margin design improves hole stability and size control while providing superior finish, roundness and cylindricity
- Self-stabilizing pyramid point design stabilizes the drill on contact with the workpiece
- Open flute structure efficiently transports chips while maintaining strength at high feed rates
- Sculpted gash allows chips to easily flow away from the drill center
- Recommended for materials $\leq 43 \mathrm{HRc}$ ( $\leq 400$ Bhn)

## SERIES 131N

The key features designed into the Hi-PerCarb ${ }^{\circledR}$ Series 131N Drill allow the product to offer application benefits not only beyond that of standard carbide drills, but also other High Performance drills. Each feature of the Hi-PerCarb ${ }^{\circledR}$ Series 131 N Drill was uniquely engineered as a solution towards addressing the issues commonly encountered during high production drilling.
A) 3-MARGIN DESIGN

- superior surface finish, roundness and hole cylindricity
- unsurpassed hole size control

B SELF-STABILIZING POINT

- pyramid design stabilizes the drill on contact with the workpiece
C OPEN FLUTE STRUCTURE
- efficiently transports chips while maintaining strength at high feed rates
(D) SCULPTED GASH
- allows chips to easily flow away from the drill center
- reduced cutting forces over competitive three-flute designs
(E) - MINIMAL MARGIN DESIGN excessive margin contact with the workpiece
- parallel design maintains contact width as margin wears for performance consistency

# PERFORMANCE. PRECISION. PASSION. HI-PERCARB ${ }^{\oplus}$ SERIES 131N ALUMINUM DRILLS 

## PERFORMANCE.

## PRECISION.

SERIES 131N 3 Flute Drill vs. Competition 2 Flute Drill in 2024 Aluminum

4847 RPM 65 INCHES PER MINUTE

## 6786 RPM

100 INCHES PER MINUTE

## PASSION.

Lab Results Indicate the Hi-Per Carb ${ }^{\circledR}$ Series 131N Drill outperforms the competition in measured hole quality at a variety of speed and feed rates.

## 9530 RPM <br> 200 INCHES PER MINUTE

This ceramic based coating ensures a smooth surface and a low affinity to cold welding or edge build-up, which makes it optimal for aluminum and copper applications. It has high toughness and high hardness.
Microhardness: 4000 HV
Oxidation Temperature: $850^{\circ} \mathrm{C} / 1562^{\circ} \mathrm{F}$
Coefficient of Friction: 0.10-0.20
Thickness: 1-2 Microns (based on tool diameter)

FRACTIONAL \& METRIC
Series 131N

-3-margin design improves hole stability and size control while providing superior finish, roundness and cylindricity

- Self-stabilizing pyramid point design stabilizes the drill on contact with the workpiece
- Open flute structure efficiently transports chips while maintaining strength at high feed rates
- Sculpted gash allows chips to easily flow away from the drill center
- Recommended for materials $\leq 175$ Bhn ( $\leq 16$ HRc)

## FRACTIONAL \& METRIC

Series 131N

- 3-margin design improves hole stability and size control while providing superior finish, roundness and cylindricity
- Self-stabilizing pyramid point design stabilizes the drill on contact with the workpiece
- Open flute structure efficiently transports chips while maintaining strength at high feed rates
- Sculpted gash allows chips to easily flow away from the drill center
- Recommended for materials $\leq 175$ Bhn ( $\leq 16$ HRc)

FRACTIONAL \& METRIC
Series 131N

- 3-margin design improves hole stability and size control while providing superior finish, roundness and cylindricity
- Self-stabilizing pyramid point design stabilizes the drill on contact with the workpiece
- Open flute structure efficiently transports chips while maintaining strength at high feed rates
- Sculpted gash allows chips to easily flow away from the drill center
- Recommended for materials $\leq 175$ Bhn ( $\leq 16$ HRc)

SERIES 120
(A) 4-MARGIN CONSTRUCTION

- improves drill stability for better hole finish and size control

SERIES 120 COMPOSITE DRILL
The key features of the 8 Facet Double Angle Series 120 drill design offers application benefits beyond that of other high performance drills in its category. Each feature of this 8 facet design was engineered as a solution towards addressing the issues commonly encountered during Composite drilling. This unique High Performance design successfully creates an accurate hole without splintering or delamination.

- allows coolant to reach the point for improved hole quality and extended tool life
(B) DOUBLE ANGLE POINT
- minimizes workpiece delamination on drill entry and exit
- redistributes loads along multiple cutting edges for improved performance
(C)

NOTCHED POINT

- reduces cutting forces at the drill center for enhanced performance and tool life - manufactured exclusively with Di-NAMITE ${ }^{\circledR}$ coating for even wear, extended tool life, and improved finishes

PERFORMANCE. PRECISION. PASSION. SERIES 120 COMPOSITE DRILL

## PERFORMANCE.

- 4-margin design stabilized the drill for greater hole accuracy and improved surface finish in final hole.
- Minimized delamination at hole entry/exit.
- Manufactured exclusively with Di-NAMITE® ${ }^{\text {c }}$ coating for even wear, extended tool life and improved finishes.

## PRECISION.

A test was conducted of our CFRP drill to determine the necessity of coating when drilling Carbon Fiber material. Fifty holes were drilled using a special size .190" CFRP drill. The tool's design produces acceptable quality holes; but as shown in the photos, early edge wear on the uncoated drill resulted in holes with frayed edges. The diamond coated drill produced all 50 holes with little to no fraying and edge wear was $38 \%$ less than the uncoated drills.
The geometry of the 8 Facet drill with the Di-NAMITE ${ }^{\oplus}$ coating is a necessity for additional tool life and productivity when manufacturing Carbon Fiber material.

## PASSION.

- The compound angle creates 4 cutting edges along the drill point.
- Distinct double angle prevents abrasiveness of the Composite from localizing along the point and diminishing tool life.

FRACTIONAL \& METRIC

Solid Carbide Tools
$\underbrace{\infty}_{\text {Common }} \underbrace{5 \pi \pi \sqrt{0}}_{\text {Reach }}$

Point Angle

- 4-margin design stabilizes the drill for greater hole accuracy and improved surface finish
- Notched point reduces thrust force over conventional designs
- 8 facet point reduces fiber breakout and delamination on exit
- 90 degree secondary chamfer angle improves hole entrance and exit quality

## SERIES 135

The key features designed into the Hi-PerCarb ${ }^{\circledR}$ Series 135 Drill allow the product to offer application benefits not only beyond that of standard carbide drills, but also other High Performance drills. Each feature of the Hi-PerCarb ${ }^{\circledR}$ Series 135 Drill was uniquely engineered as a solution towards addressing the issues commonly encountered during high production drilling.
(A) $\frac{\text { HIGH PERFORMANCE FLUTE DESIGN }}{\bullet \text { efficiently transports chips }}$

- increases strength for aggressive drilling

Ti-NAMITE®-A COATING

- improves resistance to heat and wear
- enhances tool life
(B1) 4-MARGIN DESIGN
- improves accuracy and surface finish
(B2) • increases stability and rigidity
C SECONDARY FLUTE
- improves coolant flow to point
- reduces friction along drill body
- assists in fine swarf evacuation
(D) SPECIALIZED $145^{\circ}$ NOTCHED POINT
- improves chip control
- decreases drill thrust and deflection

ENGINEERED EDGE PROTECTION

- improves edge strength
- reduces edge fatigue
- allows increased feed rates

## PERFORMANCE. PRECISION. PASSION. HI-PERCARB ${ }^{\circledR}$ SERIES 135 DRILLS

Solid Carbide Tools

## PERFORMANCE.

## MACHINING ENVIRONMENT:

Haas VM-3 with 9\% Water Soluble Oil Flood Coolant 5/16" (.3125) diameter hole:
4140 application - $.650^{\prime \prime}$ deep
6AI-4V application - 1.125" deep

The 4-margin design gives the Hi-PerCarb® Series 135 Drill a burnishing effect and the flute form effectively controls and transports chips allowing the drill to offer superior surface finishes and hole size in high production environments saving cycle time by often avoiding the need for reaming in many applications.

## PRECISION.

The stability of the 4-margin design and penetration capability of the point geometry allow the Hi-PerCarb ${ }^{\circledR}$ Series 135 Drill to address demanding applications that would normally require reduced operating parameters or a two step process.

## PASSION.

The secondary flute provides a channel for cooling capabilities normally not found in external coolant drills, this combined with the Ti-NAMITE ${ }^{\text {- A A tool coating and the high strength edge design results in increased operating }}$ parameters with additional tool life.

■ TOOL COST REDUCED BY
■ MACHINING COST REDUCED BY - COOLANT COST REDUCED BY

- MACHINE DOWNTIME COST REDUCED BY TOOL CHANGE COST REDUCED BY - ADMINISTRATIVE COST REDUCED BY

Using 100 tools per job compared to 358 means less inventory and fewer purchase orders to issue resulting in improved administrative cost and reduced tooling cost per job.

- Increasing the feed by $278 \%$ has decreased the total hours of machine time by 100 hours gaining manufacturing capacity; this factored with the hourly shop rate has resulted in the largest portion of the savings.
■ With a tool life of 500 parts compared to 140 parts or a $357 \%$ improvement in tool life equates to less time dedicated to changing tools to keep the job running.
- Increasing the material removal rate by . 28 cubic inches or $275 \%$ requires less time in the cut and a reduced use of coolant.

FRACTIONAL \& METRIC

| - 4-margin design |
| :--- |
| improves accuracy and |
| surface finish along with |
| increased strength for |
| agrasssive drilling |
| - Specialized self- |
| centering notched point |
| eliminates the eneed for |
| spot drilling decereasing |
| thrust and deflection |
| - Engineered edge |
| protection improves edge |
| strength and reduces |
| edge fatigue ellowing for |
| increased feed artes |
| - Recommended for |
| materials $\leq 50$ HRc |
| ( $\leq 475$ Bhn) |

FRACTIONAL \& METRIC SERIES

- 4-margin design improves accuracy and surface finish along with increased strength for aggressive drilling
- Specialized selfcentering notched point eliminates the need for spot drilling decreasing thrust and deflection
- Engineered edge protection improves edge strength and reduces edge fatigue allowing for increased feed rates
- Recommended for materials $\leq 56$ HRc ( $\leq 577$ Bhn)

HIGH PERFORMANCE CARBIDE DRILLS

The key features designed into the Hi-PerCarb ${ }^{\circledR}$ Series 146 U and 136 U Drills allow the product to offer application benefits not only beyond that of standard carbide drills, but also other High Performance drills. Each feature of the Hi-PerCarb ${ }^{\circledR}$ Series 146 U and 136 U Drills was uniquely engineered as a solution towards addressing the issues commonly encountered during high production drilling. SERIES 146U / 136U
(A)

- a unique coolant channel design allows repositioning of the trailing margins for improved stability over conventional two and four margin drills
- eccentric style clearance reduces margin contact with the workpiece without reducing strength
(B)

END GEOMETRY

- the primary only relief allows the trailing margins to help stabilize the drill up to three times faster than conventional designs
- high shear corner geometry minimizes exit bur
- computer controlled edge hone protects against edge chipping in difficult applications
(C)

COOLANT CHANNELS

- the two-channel design provides additional coolant in the hole when thru-tool coolant is not available
(D)

COATING AND CARBIDE

- proprietary SGS Ti-NAMITE ${ }^{\oplus}-\mathrm{X}$ coating and post-coat polishing combine to minimize material adhesion and maximize wear resistance in a wide range of workpiece materials
- all Series 146 U and 136 U drills are manufactured from lab certified premium quality carbide

PERFORMANCE, PRECISION. PASSION. H-PERCARB ${ }^{\oplus}$ SERIES 146/336U FLAT BOTTOM DRILS

## PERFORMANCE.

## HOLE <br> DIAMETER VARIATION <br> 4140 alloy steel / 19 HRc 2700 rpm / 25.4 ipm straight blind holes with flood coolant <br> CMM diameter measurement of ten random holes shows the size variation produced by the Series 136U is ten times better than the competition.

## TOOL LIFE

4140 alloy steel / 19 HRc 2700 rpm / 25.4 ipm straight blind holes with flood coolant
Tool life testing was performed until each drill exhibited sufficient damage to stop the test. Results show the Series 136 U lasts 40 percent longer than competitor 2 and 250 percent longer than competitor 1.

## WALL

## STRAIGHTNESS

4140 alloy steel / 19 HRc 2700 rpm / 25.4 ipm $30^{\circ}$ angle with flood coolant

Wall straightness of holes drilled on a $30^{\circ}$ angle show the Series 136 U produced 39 percent less deflection than competitor 3 and 57 percent less than competitor 2. During this test all tools were extended from the holder at an equal amount.

FRACTIONAL \& METRIC
Series 146U

$\square$
Common

Internal
Point Angle
Margins

FRACTIONAL \& METRIC SERIES

| - 4-margin design |
| :--- |
| improves accuracy and |
| surface finish along with |
| increased strenth for |
| aggressive dirling |
| - Speciailizeds self- |
| centering notched point |
| eliminates the need for |
| spot drilling decereasing |
| thrust and deflection |
| - Engineered edge |
| protection inproves edge |
| strenth and reduces |
| edge fatigue allowing for |
| increased feed rates |
| - Recommended for |
| materials $\leq 56$ HRc |
| ( $\leq 577$ Bhn) |

FRACTIONAL \& METRIC
Series 136U
Common

Point Angle

FRACTIONAL \& METRIC SERIES

| - 4-margin design |
| :--- |
| improves accuracy and |
| surface finish along with |
| increased strength for |
| aggeressive drilling |
| - Specialized self- |
| centering notched point |
| eliminates the need for |
| spot drilling decreasing |
| thrust and deflection |
| - Engineered edge |
| protection improves edge |
| strength and reduces |
| edge fatigue allowing for |
| increased feed rates |
| - Recommended for |
| materials $\leq 56$ HRic |
| ( $\leq 577$ Bhn) |

| inch \& mm |  |  |  |  |  |  |  | EDP NO. |

reduce rates when material is harder than listed, when drilling conditions are not optimum, or coolant is not available
rates shown are for drilling into a flat surface and should be lowered using the reducion multiplier when the workpiece is angled or curved
reduce rates 10 to 20 percent when using drills without internal coolant
always use the shortest overhang possible
longer drills may require a spot drill operation to avoid walking on entry
internal coolant required in ISO S and M material groups or when drilling depth exceeds 3xD
Bhn (Brinell) HRc (Rockwell C) HRb (Rockwell B)
$\mathrm{rpm}=\mathrm{Vc} \times 3.82 / \mathrm{DC}$
$i p m=\operatorname{Fr} \times \mathrm{rpm}$
speed and feed for materials harder than listed
refer to the SGS Tool Wizard ${ }^{\circledR}$ for complete technical information (www.kyocera-sgstool.com)

reduce rates when material is harder than listed, when drilling conditions are not optimum, or coolant is not available
rates shown are for drilling into a flat surface and should be lowered using the reducion multiplier when the workpiece is angled or curved
reduce rates 10 to 20 percent when using drills without internal coolant
always use the shortest overhang possible
longer drills may require a spot drill operation to avoid walking on entry
internal coolant required in ISO S and M material groups or when drilling depth exceeds 3xD
Bhn (Brinell) HRc (Rockwell C) HRb (Rockwell B)
$\mathrm{rpm}=(\mathrm{Vc} \times 1000) /(\mathrm{DC} \times 3.14)$
$\mathrm{mm} / \mathrm{min}=\mathrm{Fr} \times \mathrm{rpm}$
speed and feed for materials harder than listed
refer to the SGS Tool Wizard ${ }^{\circledR}$ for complete technical information (www.kyocera-sgstool.com)

| up to 30 | 1.0 | 0.6 |
| over 30 | 0.7 | 0.4 |

solid carbide cutting tool technology for the aerospace, metalworking, and automotive industries with manufacturing sites in the United States and United Kingdom. Our global network of Sales Representatives, Industrial Distributors, and Agents blanket the world selling into more than 60 countries.

## LEADERS IN SOLID CARBIDE

TOOL TECHNOLOGY
Brand names such as Z-Carb, S-Carb ${ }^{\oplus}$, V-Carb, Hi-PerCarb ${ }^{\oplus}$, Multi-Carb have become synonymous with high performance tooling in the machining and metalworking industry.

We're proud to have pioneered some of the world's most advanced cutting technology right here on our Northeast Ohio manufacturing campus. KSPT high performance end mills, drills and routers are increasing productivity and reducing cost around the world.

## EXCEEDING CUSTOMER EXPECTATIONS

As the world's manufacturing needs change, so does KSPT. It's all about the science, starting with our lab inspected substrate materials to our tool designs and coatings. Our exceptional team of researchers, engineers, and machinists are dedicated to developing the absolute best and delivering the ultimate Value at the Spindle ${ }^{\circledR}$.

- Incredible batch-to-batch consistency
- Metallurgical lab dedicated to testing and rigorous quality control
- ISO 9001:2015 Certified quality procedures
- Patented geometries that extend tool life, reduce chatter, cut cycle times, and improve part quality-even at extreme parameters
- Specialists in extreme and demanding product applications
- Comprehensive tooling services
- Experienced Field Sales Engineers who work to optimize a tool for your particular application
- Dedicated multi-lingual customer service representatives

SGS PRODUCTS ARE DISTRIBUTED BY:
